## **Skycore & Digital Solutions Launch new Commercial MMSC**

Skycore LLC, a global leader in MMS messaging and value added services, has partnered with Digital Solutions, the creators of the Mbuni Open Source MMSC, to create a commercial version of Mbuni suitable for large network operators. This version of Mbuni will come with improved features, priority support and on-going maintenance. Operators and service providers licensing this version will not be limited by the Open Source (GPL) restrictions, including having to release their customizations to the public domain.

A mobile operator MMSC provides core network switching of MMS traffic, just as the SMSC provides message switching for SMS traffic. Mbuni MMSC enables mobile operators and service providers the ability to offer innovative Multimedia Messaging Services (MMS) to subscribers. Most modern mobile handsets support MMS, making it possible for subscribers to easily and instantly exchange photos, videos, audio and other multimedia content. This partnership will allow Mobile Network Operators (MNO) to continue to use Mbuni commercially, and the full potential offered by MMS, in a cost effective, proprietary and reliable manner.

Mbuni boasts over 150 installations worldwide, and has been deployed commercially by several live network operators around the world. Mbuni is built to run on a Linux platform with each build capable of supporting hundreds of MMS messages per second. Mbuni was originally developed on an open source model and has been refined collaboratively over the past four years. This model has ensured rapid improvement, superior standards-compliance and easy customization/extensibility.

### **About Skycore LLC**

Founded in 2003, Skycore LLC is a mobile value added service provider (VASP) specializing in network centric multimedia delivery technologies and applications. Skycore has sold over 10,000 MMS Composers since 2003 and has provided connectivity to MMS server clusters scaled to 1000 messages per second. Skycore's customers range from mobile operators and content providers to advertisers and individual consumers. Skycore's instant multi-media publishing and messaging platform gives any user the tools to create unique and compelling mobile multimedia offerings.

### **About Digital Solutions**

Founded in May 1998, Digital Solutions aims to fill technological gaps in the regional and global markets by providing quality software solutions to the telecommunications and information technology industries. Digital Solutions has not only developed into a strong software house, it is also a leader in the local community and has shown a continued commitment to recognizing and developing local talent. In addition to Mbuni, Digital Solutions currently provides multiple proprietary software products in the telecommunication and information technology markets.
